

Amanda Argotti

Software Engineering Student | AI & Software Developer

Multilingual software engineer building practical AI-powered educational systems with LLMs, NLP, RAG, and Python backend architecture.

PROFESSIONAL SUMMARY

Software Engineering student at Kazan Federal University with hands-on experience building AI-powered educational systems, mobile applications, and backend services. Strongest work includes Juanito, a Spanish-learning AI assistant for Russian-speaking learners using local LLMs, teaching-oriented translation, quizzes, flashcards, reminders, and personalized learning flows. Interested in AI, NLP, educational technology, backend systems, human-AI interaction, and multilingual AI applications.

EDUCATION

Kazan Federal University (KFU)

Bachelor's Degree in Software Engineering | 2022 - 2026 | Kazan, Russia

Diploma / Thesis: Development of an AI Assistant for Learning Spanish Using Large Language Models

Relevant areas: Artificial Intelligence, Software Engineering, Database Systems, Backend Development, NLP & LLM Applications, Human-Computer Interaction, Algorithms & Data Structures.

TECHNICAL SKILLS

Programming	Python, SQL, Java, Go, Dart, JavaScript
AI / NLP	LLMs, prompt engineering, RAG, Ollama, Whisper STT, TTS, conversational AI
Backend	REST APIs, client-server architecture, SQLite, JSON storage, database design
Frontend / Mobile	Flutter, Gradio, Telegram Bot API, Vue, HTML/CSS
Tools	Git, GitHub, Linux/macOS, VS Code, local AI deployment
Languages	Spanish native, English B2-C1, Russian B1

SELECTED PROJECTS

Juanito - AI Assistant for Learning Spanish

Diploma project | Python, Ollama, SQLite, Gradio, Telegram Bot API, Whisper/TTS | github.com/AmyArgotti/juanito-spanish-assistant

- Built an AI-assisted Spanish-learning platform for Russian-speaking users with translation, grammar explanations, vocabulary saving, quizzes, reminders, and conversational tutoring.
- Integrated local LLM workflows through Ollama to support teaching-oriented responses rather than simple text generation.
- Designed personalized learning flows using saved vocabulary, flashcards, spaced repetition ideas, and learner progress signals.
- Added pronunciation support direction through TTS audio and Russian-letter transliteration for beginner-friendly Spanish reading practice.

Expense Tracker - Flutter Finance Application

Mobile project | Dart, Flutter, SQLite, MVVM, SharedPreferences | github.com/AmyArgotti/expense-tracker-app

- Developed a mobile expense tracking app for income, expenses, categories, accounts, and local transaction storage.
- Implemented SQLite persistence, MVVM architecture, adaptive navigation, dark mode state saving, and data restore behavior.
- Added mobile features including geolocation, receipt photo attachment, reminder notifications, biometric/device credential lock, and service-style sync demo.

Restaurant Loyalty System

Freelance project | Python, SQL, APIs

- Developed backend business logic for customer tracking, loyalty points, and restaurant data workflows.
- Applied database-oriented thinking to support repeat customer management and operational records.

Academic Software Engineering Work

Public GitHub repositories | Java, Vue, JavaScript, HTML/CSS

- Maintained public coursework repositories demonstrating Java programming, calculator implementations, web exercises, Vue practice, and semester project development.
- Built a visible record of steady technical growth across programming fundamentals, software design, and web/mobile development.

RESEARCH INTERESTS

Artificial Intelligence; NLP and conversational AI; educational technology; AI for language learning; human-AI interaction; personalized learning systems; multilingual AI systems; software engineering.

EXPERIENCE WITH AI SYSTEMS

- Prompt engineering for structured LLM interaction and teaching-oriented response generation.
- Context-aware AI workflows with personalization, saved learner data, and retrieval-style adaptation.
- Local AI deployment using Ollama and integration planning for speech recognition/pronunciation features.

STRENGTHS

Analytical problem solving; fast learner; cross-cultural communication; research-oriented mindset; independent project development; creative AI builder; international perspective.

TARGET ACADEMIC / CAREER AREAS

AI developer roles, backend internships, research assistant opportunities, scholarships, and master's programs in AI, NLP, computer science, HCI, educational technology, and software engineering.
